Capability Statement

Client Focused Consultancy

Lucidity IT is based on the Sunshine Coast in Queensland, Australia. We offer technical business solutions to the south-east corner, and Australia wide. We have partnered with key vendors because we believe these vendors offer the 'big picture' ideologies that provide actual positive ROI to your organisation.

We actively encourage a 'step back' approach that takes into account requirements from your board level/C-Level down to the employees on the shop floor, to understand and offer innovative solutions that are intricately and purposely engineered to meet and exceed the business requirements/expectations.

Whilst cost is a commercial reality that we all face, innovative technologies are appearing on a daily basis that can provide a cost-effective solution to the most difficult problems. Reducing the CAPEX spend to a more agile OPEX expenditure can release far-reaching benefits for your organisation.

Not only do we keep abreast of current and upcoming technologies but we are constantly striving for ways that these technologies can reduce cost and increase efficiencies for SME to large enterprises.

We actively pursue a candid and upfront discussion of what the business actually requires, current problems being faced and the upcoming strategic direction of the organisation. We can quickly identify enhanced ways to use existing investments of technology, strategic ways to reduce complexity and help your organisation receive a positive return on investment from your technology budgets.

Technology Governance

Lucidity IT acts as an independent, objective technical advisory and provides feedback on existing systems as well as recommendations for the best course of action. We ensure that technology is aligned with your business plans.

Enterprise Architecture

Lucidity IT has strong end-to-end capabilities in the enterprise architecture space and is able to assist clients with any aspect of their enterprise architecture.
